²Independent rating services (such as Standard & Poor's, Moody's and Fitch) assign ratings, which generally range from AAA (highest) to D (lowest), to indicate the credit worthiness of the underlying bonds in the portfolio. Where the independent rating services differ in the rating they assign to an issue or do not provide a rating for an issue, the highest available rating is used in calculating allocations by rating. Non-rated bonds are holdings that have not been rated by a nationally recognized statistical rating organization.

Definitions

Holdings refer to the individual bonds or debt securities that make up the fund's portfolio. These holdings are the actual assets in which the fund has invested. **Effective Duration** measures change in the value of a security in response to a change in interest rates. **Weighted Average Maturity** refers to the average time it takes for all the bonds within a portfolio to mature, where each bond's maturity is weighted by its proportion of the total portfolio value. **12-Month Default Rate** represents the percentage of bonds outstanding and/or held that have defaulted over the previous 12-month period. **Standard Deviation** measures that an investment will fluctuate from its expected return. The smaller an investment's standard deviation, the less volatile it is considered to be. Conversely, the larger the standard deviation, the more volatile the investment. **Downside Capture** measures manager's performance in down markets. A down-market is defined as those periods (months or quarters) in which market return is less than 0. Beta is a measure of systematic risk with respect to a benchmark. **Beta** measures the sensitivity of the fund's excess return (total return minus the risk-free return) with respect to the benchmark's excess return that results from their systematic co-movement. The beta of the market is 1.00 by definition.
